Czech tradition and world design trends are associated with the RAV SLEZAK brand

We are Czech manufacturer of the faucets and bathroom accessories since 2001. In our assortment we also offer shower sets, siphons, angle valves and other accessories

We also produce perfect reproduction of faucets bespoke or refurbish existing ones for the reconstruction of important world historical buildings.

PVD (Physical Vapor Deposition)

This technology enables the creation of high-quality and durable surfaces with a wide range of colors and finishes for mixers and bathroom accessories.

PVD coating is a process where solid material micro-particles are vaporized in a vacuum and deposited onto the coated material under high pressure. The vaporized micro-particles bond directly with the material they are applied to. Additionally, this method is highly environmentally friendly, and the surface layer is hypoallergenic. PVD is also a technology with excellent physical and chemical properties, high hardness, resistance to abrasion, high temperatures, and corrosion.

PVD coating has numerous advantages, including:

High hardness and abrasion resistance – PVD-coated surfaces are much more resistant to scratching than uncoated surfaces.

Corrosion resistance – PVD-coated surfaces are resistant to water, salt, and other aggressive substances.

Wide range of colors and finishes – PVD coating allows for a wide range of colors and finishes that can be customized to individual customer.
